Florida

Green Building Program

Setting the standards for Green Building in the State of Florida

www.FloridaGreenBuilding.org
1. GENERAL PROVISIONS

1.1 Purpose. The provisions of this document are intended to establish a voluntary, state-wide standard for Green Development Designation. This enhances the goal of achieving uniform and meaningful green development designations for Florida.

1.2 Scope. These standards apply to Green Development Designations located in Florida. The developments could be mixed-use, commercial, residential, campus-type, or any other type that involves change of Florida land area. The Green Development Designation applies to the horizontal planning, design, and development of the land. Other green standards (homes, commercial, schools) apply to individually permitted parcels and building construction.

2. OPERATING PRINCIPLES

2.1 Qualification shall not circumvent any local or other jurisdictional laws, unless so allowed by the jurisdictional body as an incentive for complying with this standard.

2.2 Credit points are gained through measures that benefit the environment. The basis for the weighting of points shall be environmental benefit; however, it is understood that in some cases the weighting, by necessity, is subjective due to the various types of environmental benefit incurred (water vs. air pollution; tree protection; etc.).

2.3 A list of qualifying improvement features and their respective Credit Points shall be maintained by the Florida Green Building Coalition, Inc. such that the Credit Point list is open to new features through a regular, technical and public review and acceptance process that is defined by this Standard.

2.4 The Credit Point features list (Schedule A) shall be organized into categories. A minimum may be required by category, as well as a minimum overall. A maximum by category may also apply so as to spread the effort among various development features. In order to retain the strictness over time, the overall points available, 600, and maximum category totals earned towards designation, 400, shall not increase; and points needed to qualify, 200, shall not decrease. If new measures are to be considered, then existing measures must be reduced in value or eliminated.

2.5 For each development that qualifies for the Green Development Designation, written certification, fully disclosing all the features that qualify the development, shall be provided to any purchasers or local officials upon request. Failure of a developer to disclose this information will be grounds for removal of the designation.
3. **DEFINITIONS AND ACRONYMS**

*Credit Points* – Qualification points assigned to features that improve the environmental impact of the development process or improve the environmental impact of future activities in the development relative to typical new Florida developments.

*Florida Green Building Coalition, Inc. (FGBC)* – A Florida non-profit corporation with open membership whose primary mission is to develop and maintain Green Designation Standards for Florida and to promote cost-effective, sustainable improvements in the built environment.

*Green Development* – A land development process that incorporates multiple environmental, ecological and sustainability features (e.g., conservation of resources, Green utilities, pedestrian-oriented circulation) that reduce the environmental degradation significantly when compared with a development that just minimally meets state and local regulations.

*Project Evaluator* – An individual assigned by the Florida Green Building Coalition, Inc. to evaluate a development with respect to the criteria contained in this Standard for the purposes of certifying that the qualifications for a Florida Green Development Designation have been achieved.

4. **CERTIFICATION PROCESS**

4.1 An application for a Florida Green Development Designation given in Schedule A using the FGBC Green Development spreadsheet tool shall be completed by the development team and the full fee paid for at the time of application; or alternatively, a non-refundable deposit and pre-submittal form can be submitted with the balance of documentation and fee paid later.

4.2 A project evaluator shall be assigned by FGBC after receiving an application and fee.

4.3 The project evaluator will answer questions regarding necessary submittal documents and verify that all necessary materials, as specified in Schedule A and the reference guide for the applied for points, have been received. The project evaluator is to simply be the evaluator for FGBC and a reference regarding any interpretation of the standards, not a consultant for the design team.

4.4 The project evaluator shall verify the correct points earned based on information received and any other verification. Verification will often require a trip to the development site.

4.5 The project evaluator shall forward the verified schedule A and any calculations and documentation to FGBC for archiving.

4.6 The Florida Green Building Coalition, Inc. shall uphold the standard including, if need be, denying certification of applicants for failure to meet the minimum requirements of the standard. Failure to comply with the standard shall not be grounds for any refund of the application fee to the applicant.

4.7 Certification of a Florida Green Development Designation shall be provided in writing and accomplished in accordance with the provisions of this Standard.

4.8 Each Florida Green Development Designation certificate shall include the following:

8.1 The seal of the Florida Green Building Coalition, Inc.;
8.2 The name of the development and the developer;
8.3 The city or county where the development is located;
8.4 The signature and typed or printed name of the project evaluator;
8.5 The date the certification was completed; and
8.6 The statement: “This certification is provided by the Florida Green Building Coalition, Inc. Any questions, comments, or complaints regarding the Green Designation of this development may be directed to the Florida Green Building Coalition, Inc.”

4.9 Each Florida Green Development Designation certification shall include a disclosure stating that the project evaluator had no financial interest in the project or current contracts/obligations with any member or organization of the development team (engineers, landscape architects, etc.).

5. **SELECTION OF FGBC PROJECT EVALUATOR**

5.1 Any organization or individual wishing to serve as a project evaluator may request to do so by completing an application.

5.2 At a minimum, the following information shall be required of and kept on file for each applicant for accreditation as an FGBC project evaluator:

2.1 Full name
2.2 Social security or (for corporations) federal ID number
2.3 Permanent mailing address, phone number and, if applicable, e-mail and web page address(es)
2.4 Occupation (primary source of income)
2.5 Employer and length of employment
2.6 Statement of applicant's qualifications for reviewing the breadth of criteria given in Schedule A and the reference guide
2.7 Agreement to report each certified Green Development to the Florida Green Building Coalition and to uphold the provisions of this Standard including the no-financial interest agreement (section 4.9 above)

5.3 Any project evaluator must be an FGBC member in good standing (membership fees up to date) or an employee of an organization that is an FGBC member in good standing.
5.4 The executive committee of the FGBC shall contract or assign an organization or person to receive applications. That organization or individual will then assign an appropriate project evaluator from the available list of project evaluators.
5.5 A cost for evaluation services rendered shall be negotiated between FGBC and the project evaluator or their organization.

5.6 FGBC reserves the right to have its own staff, staff working for FGBC under contract, or qualified volunteers assigned as project evaluators, and also has the right to select the evaluator of their choice for any given project.

6. BASIS FOR QUALIFICATION

6.1 Each development shall qualify as described in schedule A and the reference guide, and each item receiving credit shall be verified by the project evaluator.

6.2 Appropriate Standard.
Applicants may comply with the standard in effect when they applied, or if the standard has been revised prior to certification, they may comply with the new standard (see Section 8 below).

7. STANDARDS DOCUMENTS

The following documents are part of these standards and shall be made available on a public web site:

7.1 Schedule A (also referred to as the Green Development Designation Standard Checklist):

1.1 Schedule A shall include a list of credit features and the maximum points that may be possible for some developments to achieve for that feature.

1.2 Schedule A shall include a location for an applicant to indicate the number of points they believe they have earned for any credit feature.

1.3 Schedule A shall include a location for the applicant to total the estimated earned points.

1.4 Schedule A shall include a certification application form. At a minimum the applicant must include:

(4)1 The name of the development

(4)2 The developer(s)

(4)3 The pertinent development team members (engineers, planners, etc.)

(4)4 The street address, phone, fax, email and website addresses of the developers

(4)5 The legal description of the development property

(4)6 A signature of the applicant
1.5 Schedule A must include the application fee and indicate accepted channels for payment.

7.2 Reference Guide:

2.1 The reference guide shall provide information regarding the procedures for earning points and developing environmentally friendly methods.

2.2 The reference guide shall, at a minimum, include each possible credit item and the procedure for earning points for that item.

2.3 Every attempt shall be made to describe how the points will be earned so that they can be objectively evaluated.

2.4 The reference guide will include documentation requirements for earning points for a given item.

2.5 The reference guide shall make every attempt to include descriptions of environmental benefits associated with each item or category of credit items.

2.6 The reference guide shall make every attempt to include examples of Florida developments that have incorporated features that have met, or would likely meet (for older developments used as examples) at least part of the credit points for a given item, if the details and associated graphic materials of such an example are made available. In the case of photographs, photo credit and copyright releases will need to be obtained prior to use.

2.7 FGBC shall reserve the right to determine if only one example or more than one example is used to illustrate a given credit item in the reference guide.

7.3 A Modification Form used for revision of this standard shall include the following fields:

3.1 Name, address, contact information and affiliation of proponent

3.2 Full description of change requested

3.3 Specific language desired

3.4 Technical basis or justification for change

3.5Recommended number of credit points for any credit point changes or additions

3.6 Justification for recommended number of credit points
8. **REVISION PROCEDURES FOR THE GREEN DEVELOPMENT STANDARD**

8.1 Suggested revisions shall be submitted to the Florida Green Building Coalition, Inc. using a form available at the FloridaGreenBuilding.org web site as described in Section 7.3.

1.1 Applications shall be compiled and circulated to the Florida Green Building Coalition Green Developments Committee, past applicants, and project evaluators for comments. The comment period shall be at least thirty days.

1.2 Following the public comment period, each application and its public comments shall be reviewed by the Florida Green Building Coalition Green Developments Committee, which will then make written consensus recommendations to the Board of Directors for suggested revisions to the standard along with the original applications.

1.3 The Board of Directors of the Florida Green Building Coalition, Inc. shall adopt, adopt with modification, or reject each application for change.

8.2 Revision Cycle for the Green Development Designation Standard:

2.1 Periodic review. At least triennially, the provisions set forth in these Green Development Designation Standards shall be reviewed by the Standards Committee of the Florida Green Building Coalition, Inc. in collaboration with other stakeholders. At a minimum, this review shall include consideration and evaluation of changes in the law, technological innovations, and comments and requests received from interested parties.

2.2 All applications for revision shall be disposed of on an annual cycle such that applications received prior to the last working day of June 15 are included in the application review cycle that concludes no later than September 15.

2.3 The Board shall approve any changes to the standard by the last day of October in any year in which it is to be revised.

2.4 Any new standard shall be in placed on the web site (along with the current standard) no later than November 15.

2.5 The effective date of any new Green Development Designation Standards shall be January 1. Only those proposals to change these Green Development Designation Standards that are received on or prior to June 15 shall be considered for the revisions to these Green Development Designation Standards that may become effective on January 1 of the following year.

2.6 The reference guide text, graphics, and examples may be updated at anytime by FGBC so long as they are of a clarifying nature.
9. **SUSPENSION OR REVOCATION OF FGBG GREEN DESIGNATION**

The Florida Green Building Coalition, Inc. may suspend or revoke the Green Designation from a development; may request that all references to the designation be removed from all marketing and educational materials; and may impose other suspension/revoking actions.

9.1 **For Failure to Correct Deficiencies.**

If the Florida Green Building Coalition, Inc. determines at any time that an FGBG certified Green Development has failed to adhere to the procedures and activities listed in the standard for those items whereby they earned credit points, the FGBG will notify the developer of the specified deficiencies and shall require that specific corrective action, set forth in the notification, be taken not later than 30 calendar days after the date set forth in such notification.

1.1 In the event that the deficiencies have not been remedied, the Florida Green Building Coalition, Inc. shall have the authority to immediately begin the process of revoking the certification by issuance of a Notice of Suspension Proceedings. The notice may be appealed in accordance with procedures set forth herein.

1.2 In the event that the specified deficiencies are not corrected within the application period set forth in the Notice of Suspension, a Notice of Revocation Proceeding shall be issued by the Florida Green Building Coalition. Such Revocation Proceeding shall follow the due process procedures contained herein. The Notice of Revocation may be appealed in accordance with the procedures set forth herein.

9.2 **For Cause.**

Any FGBG green development certified by the Florida Green Building Coalition, Inc. may have their accreditation revoked in any of the following circumstances:

2.1 Upon determination by the Florida Green Building Coalition, Inc. that an FGBG developer has acted in such a manner as to impair the objectivity or integrity of the accrediting program or harm the reputation of the Florida Green Building Coalition, Inc. including, but not limited to submission of false information to the Florida Green Building Coalition, Inc. or failure to submit to the Florida Green Building Coalition, Inc. any material information required to be submitted in connection with obtaining or maintaining accreditation; knowingly or negligently issuing certifications that fail to meet all of the certification criteria; or misrepresentation by the developer in advertising or promotional materials of its accreditation status in general or with respect to any service provided by the developer.

9.3 **Suspension/Revocation Due Process**

The Florida Green Building Coalition, Inc. shall comply with the following due process procedures in considering any suspension or revocation actions against a developer.

3.1 **Notice**

The Florida Green Building Coalition, Inc. may, at its discretion, initiate a proposed suspension or revocation action against a developer by providing the developer written notice of the proposed action sent by certified mail, return receipt
requested, to the last known address of the developer. Such notice shall inform the FGBC developer of the entire basis and justification for the proposed action.

3.2 Contest of Proposed Suspension/Revocation
A respondent may contest a proposed suspension/revocation by filing a response with the Florida Green Building Coalition, Inc. within 30 days of receipt of the notice. The response shall contain all pertinent and substantive information and argument that is in contradiction to the proposed suspension/revocation, including identification of all disputed materials and facts. If the respondent fails to file said response within the allotted time, the Florida Green Building Coalition, Inc. may, at its discretion, suspend/revoke the accreditation of the respondent effective immediately upon written notification to the respondent.

3.3 Hearing
If the respondent files a timely response contesting the proposed suspension/revocation and requests a hearing, the Florida Green Building Coalition, Inc. will appoint an independent, unbiased, and qualified hearing officer and issue a decision on the proposed suspension/revocation. The hearing officer will review the notice of suspension/revocation and the respondent's contest. If the hearing officer finds that the respondent's contest has raised substantiated and valid factual argument to the contrary of the proposed suspension/revocation, the respondent shall be afforded an opportunity to participate in an open and public hearing, and to submit additional documentary evidence, and rebuttal argument to any material contained in the original notice of suspension/revocation or developed during the course of the hearing officer's investigation. The notice shall be provided to the respondent by written notice by certified mail, return receipt requested, to the last known address of the respondent at a minimum of 120 days before the scheduled hearing.

3.4 Hearing Officer's Decision
The hearing officer shall issue a written decision on the proposed suspension/revocation that is based on all the information contained in the hearing record including statements of the factual and legal basis of the decision. If the hearing officer decides to impose suspension or revocation, the decision must include findings regarding all disputed materials, and justification for all findings. A suspension/revocation decision by the hearing officer shall take effect upon the issuance of the hearing officer's decision and the written notification of such decision to the respondent.

3.5 No Ex Parte Communication
No ex parte communication between the parties and the hearing officer shall be allowed.

10. APPEALS PROCEDURES FOR SUSPENSION OR REVOCATION

10.1 Notification
The Florida Green Building Coalition, Inc. shall notify the developer and the Florida Green Building Coalition, Inc. Board of any and all disciplinary actions. Additionally, the Florida Green Building Coalition, Inc. shall clearly notify the developer of all procedures and rights to remedy.
10.2 Appeal

2.1 In the event that an accreditation application was not approved or the accreditation has been suspended, the developer shall have the right, for a period of 30 calendar days after the date of notice, to appeal to the Florida Green Building Coalition, Inc..

2.2 In the event that an FGBC developer accreditation is suspended following the expiration of the period to appeal a suspension, in the absence of an appeal having been taken, the developer shall have the right, at its election, for a period of 30 calendar days after the date of issue of a Notice of Suspension, to appeal to the Florida Green Building Coalition, Inc..

2.3 An appeal shall be in writing and sent by certified mail or other method which provides evidence of delivery to the Chairperson of the Florida Green Building Coalition, Inc. and shall specify the basis for the appeal.

2.4 The appellant developer may, at the time of noticing its appeal, request in writing, a hearing. In such an event, the Florida Green Building Coalition, Inc. shall, not later than 7 calendar days after the filing of the notice of appeal, appoint a hearing officer and notify the appellant developer of the date of the hearing, which shall be held as expeditiously as possible, but not later than 30 calendar days after the receipt of the notice of appeal.
Green Development Reference Guide

This reference guide is intended to serve two purposes: to provide information on Green Development practices and to provide details on how to earn points for complying with the Florida Green Development Designation Standard.

The goal of the FGBC Green Development Standard is to recognize those developers who have far exceeded the minimum Florida law requirements. The standard requires substantial environmental stewardship beyond typical practice, yet it allows for developers to choose how to meet the standard from a variety of methods. No one development will be able to get every item – there will be some that do not apply to every site or every type of development. However, there are enough items to choose from that every developer, through planning and dedication to Green Development, should be able to comply with the standard. This level of planning can only be done through knowledge of the site as well as applying best management practices regarding wildlife preservation, stormwater, transportation, landscaping, and utilities.

In some instances, the developer may be required by local laws to meet criteria for which FGBC gives credit. In other instances it may prove that the developer would have to fight to change or obtain waivers from local ordinances in order to meet the FGBC criteria. Again, one need not obtain every point, and every point may not be possible for your given development. The reference guide includes photos with examples of developments that have accomplished the requirement for earning points towards the Green Designation.

This standard was developed by the Florida Green Development Working Committee of the Florida Green Building Coalition, Inc. The committee had active participation from one or more architects, builders, consultants, developers, ecologists, educators, energy raters, government agencies, landscape architects, planners, Realtors, researchers, and water-management district personnel. The Coalition board must approve the standard. The board, according to the bylaws, must consist of various industry and public groups.

There are many other documents that you may be interested in reviewing. Most of these can be found at FloridaGreenBuilding.org:

♦ The FGB Green Land Development Standard and application form
♦ The FGB Green Home Development Standard, application, and reference guide
♦ The FGB Green Commercial and Municipality Standard documents, application, and reference guide
♦ A form for requesting a modification to a Green Standard
♦ Bylaws and membership information for the Florida Green Building Coalition, Inc.
Acknowledgements

This document was developed by volunteers in order that the state could have a Green Development Standard. The following FGBC members formed the core group who attended almost every meeting:

- Allen Garner, UF - Cooperative Extension Service, Palmetto, committee chair
- Patti Glenn, GreenSmart™ Newberry
- Bill Lites, Glatting Jackson Kercher Anglin Lopez Rinehart, Inc. Orlando
- Rob Vieira, Florida Solar Energy Center, Cocoa, Green Development document editor
- Bill Watkins, St. Johns River Water Management District, Palatka.

Thanks to these volunteers and their organizations as well as to the many others who made specific recommendations (any omissions are unintentional):

Glenn Acomb, UF Dept. of Landscape Architecture  Rob Andrys, Architect  Roy Bonnell, Green Building Consultant
Cynthia Caterham, Bonita Bay Group  Karen Childress, WCI Communities  Ron Dodson, Audubon International
David Drylie, Green Images  Charley Fahien, UF - Coop. Extension Service  Ken Fonorow, Florida HERO
Brad Guy, UF School of Building Construction  Mark Hostetler, UF IFAS, Wildlife and Conservation  Pierce Jones, UF energy extension
Suzanne Kennedy, Brevard Dept. of Natural Resources  Anne Koterba, Bosshardt Realty  Jennifer Languel, Construct Green
Jim Lentz, Birchwood Acres  Martha Lentz, Harmony Institute  Eric Martin, Florida Solar Energy Center
G.W. Robinson, Builder - Developer  Tom Swihart, Florida Dept. of Environmental Protection  Teresa Watkins, UF - Coop. Extension Service

Don Youatt, Engineer

Special thanks are due to the following developers who hosted the working committee meetings:

- John Curtis, Willow Walk Business Center, Gainesville
- Luis Diaz, Town of Tioga, Gainesville
- Joe King, River Forest, Bradenton
- Ed Miatta, Abacoa Partnership for Community, Jupiter
- Trey Starkey, Longleaf, New Port Richey
- Greg Vine, Sorento Cay, Venice
Green Development Reference Guide

Category 1: Protect Ecosystems and Conserve Natural Resources

Development of land from its natural state to one that is used by man is usually harmful to wildlife, our air, and our water. Choosing the most appropriate sites and preserving as much acreage of sensitive land as possible helps to mitigate some of the negative environmental aspects of development.

P-1 Redevelop an already developed site (0 - 40 pts).

Some sites have been developed. Often, harm to the environment is minimized by choosing to redevelop such sites instead of pasture and forested land.

Earn three points for each 10% of the development (by land area) that is undergoing redevelopment from some other form of built environment. Earn one bonus point for each 10% of the site that is redeveloped from being a designated brownfield site.

P-2 Develop management plan for preserved, created, or restored wetlands/uplands (20 pts) - required for receiving credit for P-3 → P-10.

The management plan must address how:

- exotic species will be removed and kept from being reestablished;
- prescribed burns or other management activities which replicate the appropriate ecosystem will be conducted;
- significant wildlife species will be protected;
- people will be educated to respect wildlife;
- interference from domestic animals will be addressed.
- the site will be monitored for detrimental changes
- the maintenance will be perpetually funded
- appropriate persons (volunteers, contractors, etc) will be selected to perform the maintenance.

Earn the points for a well thought out preservation management plan. At least 10% of the site must be preserved in order to earn credit. The formula for computing preserved land is as follows:

Non-state required land preserved (acres)
This esplanade is a featured part of the development due to planning around surveyed trees.
Development: Town of Tioga (Gainesville), Developer: Dubros Corporation, Photo: Vieira.

Total development size - state required land preserved (acres)

For example, if a development site was 1000 acres and 150 acres were designated wetlands, 180 acres water retention, 400 acres buildings and roads, 70 acres recreational open space, and 200 acres were preserved lands not mandated for protection, the formula would be:

\[
\frac{200 \text{ acres}}{1000 \text{ acres} - 150 \text{ acres}} \times 100 = \frac{200}{850} \times 100 = 0.235 \times 100 = 23.5\% 
\]

Note that recreational open space and water retention areas are not included in the preserved areas.

Covenants or deed restrictions that assume the responsibility for implementing the management plan, and explanation of why the credit is deserved.

Submittal: Written management plan.

**P-3 Provide a vegetation & tree, topographical, soil, and wildlife/habitat study prior to design (0-18 pts).**

All too often valuable natural resources are lost because designs are made prior to surveying the natural features of the land. Designs should be made to preserve the most valuable resources, and an inventory of the site must first be made to determine those natural features. Earn three points for each of these (tree, topo, wildlife) surveys submitted; earn one additional point for a wetland survey (if wetlands are present); earn thirteen points for submitting all of them. Indicate how the site plan preserves the most significant resources from each study. Tree surveys must include all trees that are equal or greater than 4” dbh and any strands of smaller caliper trees. Earn two bonus points if tree survey is signed off by a certified arborist, horticulturist, botanist, ecologist, forester, regarding correct identity of the trees. Site must preserve at least 12" of caliper per acre or 500' caliper total to claim tree survey credit.

Submittal: The complete tree, topographical, soil, wetland (if any), and wildlife study with habitat designations; a site plan showing how the design tried to preserve the most significant resources. Indicate measures taken for tree preservation.

**P-4: Conservation areas and nature parks (0-50 pts).**

Preserving land in a natural state allows for natural ecosystems to sustain their existence, particularly if large areas remain intact. Earn 1 point for each 1% of total buildable acreage that is being preserved in its natural state or is preserved as a nature park.
(required stormwater retention areas and off-site mitigation areas do not count, nor does any land that must be left undeveloped due to other state or federal governmental agencies - see formula above). Land being sold for construction purposes or land just temporarily preserved until the next planned phase will not be considered conservation area. Maximum 50 pts.

Submittal: Include copies of any environmental permits, covenants, deeds and marketing material that provide assurances that the land will be kept as conservation area over time.

**P-5 Preserve the most valuable spaces for biodiversity (0 - 8 pts).**

Biodiversity simply refers to the number of species within a given area. A highly diverse area would have many more native species than a less diverse area. Species are from a number of different taxa, including plants (e.g., trees, shrubs, and forbs) and animals (e.g., insects, mammals, birds, amphibians and reptiles, and fish). A number of different natural community types could be found on a property and certain areas may be higher quality than others. Community types include a variety of terrestrial communities (e.g., xeric uplands and mesic flatlands) and wetland communities (e.g., swamps and marshes). Descriptions of a natural community will follow Florida DEP/FNAI classification (see http://www.fnai.org/descriptions.cfm). Because of historical factors, certain parcels of a development (for a given community type) may be of high quality with many representative endemic species and little exotic vegetation. From vegetation surveys, land portions for a given community type should be ranked from 1 (poor quality) to 5 (high quality). At least 10% of the site must be preserved to receive any credit and a management plan must be submitted with this credit. Earn 1 pt for community type 2, 3 pts for type 3, 5 pts for type 4, and 8 pts for type 5.

Issues to consider for whether an area on the development is considered to be of high quality:

1) Is the natural community type rare within the county and is the conservation status fairly high according to state rankings? (see http://www.fnai.org/data.cfm),

2) Is the number of endemic species high and disturbance low?, and

3) Is the parcel situated next to existing natural habitat?

Submittal: Wildlife survey, management plan and explanation as to why the credit is deserved showing that the highest diversity communities available on the property were preserved.

**P-6: On-site conservation plan for a specific wildlife species (15 points).**

Several different state listed species (e.g., gopher tortoises) may occur on the property and require some mitigation. Also, some wildlife species on or near the property may not be listed but are of importance to the community and county. Credits will be given to a developer who does on-site conservation for a particular species. In many instances, an on-site conservation strategy that includes management and habitat preservation is the best strategy for a particular wildlife species. For example, with gopher tortoises, the developer can bury them, pay money to a mitigation bank,
transport them to another site, or provide on-site habitat and management. By far, the best solution is to provide habitat and management on site. Transporting and burying the tortoises is usually detrimental to the species.

In addition, many developments are situated next to critical wildlife habitat, and management plans that protect these habitats need to be implemented. Credits will be given if a management plan helps protect nearby wildlife. For example, a developer retains a large buffer between homes and a breeding colony of waterbirds, and through education and deed restrictions, pets are not allowed near the colony. The plan should include some type of monitoring – whether by the homeowners or by a consultant.

Submittal: Wildlife surveys, management plan that includes monitoring of the species, and explanation of why the credit is deserved.

**P-7 Maintain or provide wildlife corridors (0-18 points).**

Many species of wildlife need a larger area than that bordering a property. In some cases species travel long distances in search of food, shelter, or water. By not allowing a natural way for animals to get to where they need to go, the species may not survive in that area, even though some land is preserved. Large areas are needed, and restricting those areas too tightly can lead to excessive predator advantage. Thus credit is given for large average widths with minimum widths as well. Corridors should follow natural features that contribute to the value of the corridor and are best if they include dry and wet areas.

Ponds and berms can be used as part of the corridor widths, however the berms must be planted with native species.

Earn 2 pts for a wildlife corridor that is at least 20 feet wide minimum, averaging 50-foot wide, that connects two or more wildlife habitat areas. Each area being connected must be ≥ 2500 square feet in area. Earn 5 points if 50 foot wide minimum averaging 250 feet, 10 pts. if 75 foot wide minimum averaging 500 feet, 16 pts. if 100 foot wide or larger minimum averaging 1000 feet. Earn two bonus points for designing corridor not to cross any roads or for providing tunnels at each roadway or for connections to aquatic habitats.

References: Army Core of Engineers WRAP; Lake County Development Guideline Draft

**P-8: Preserve upland buffers to enhance preserved wetlands (12 pts).**

Upland habitats surrounding wetlands are important for biodiversity and the overall health of the wetlands. Earn four points if there is a fifteen-foot minimum buffer, preserved around all wetlands, eight points if there is a twenty-five foot minimum buffer and twelve points if there is a fifty-foot minimum buffer. There must be a total of three acres or 3% of the development (whichever is less) of wetland preserved to receive credit. For a development with more than one preserved wetland area, points may be scaled based on the percentage of wetlands that have an
upland buffer. For example, if there are four wetland areas and three have a 25-foot minimum upland buffer and one does not have an upland buffer, then $0.75 \times 8 = 6$ points can be earned.

**P-9: Preserve or provide ground water recharge areas (12 pts).**

Water recharge of the aquifer generally occurs from some of the highest, sandier areas. Preserving these areas is important to preserving the future quantity and quality of water. Earn one point for each 1% acreage that is preserved for a prime aquifer recharge area that meets the following requirements.

Prime aquifer recharge areas means those areas which are not class I or secondary aquifer recharge areas and which have the following geophysical characteristics:

a. Highly permeable soils.

b. Are above 30 feet mean sea level.

c. A potentiometric surface below the high water table preserved for water recharge.

There must be a minimum of 3 acres to receive any points. Maximum 12 points

Submittal: Show water recharge area and how development will maintain or enhance the recharge.

**P-10 Restore native wildlife habitat (10 pts).**

Restore and maintain at least 10% of the land area from a previously developed, significantly disturbed, invaded by exotics or pasture use, to its historical natural habitat or other more appropriate habitat relating to current soils, plants, and water.

Submittal: Photos or survey indicating prior use and design indicating restoration.

**P-11 Reuse or recycle materials on site (0 -10 pts).**

Although soil removed for retention areas is often used on site, other resources are not. Trees could be used for lumber or mulch for public areas or for future construction activities. Any existing buildings could have valuable resources recycled to the construction industry. Earn one point for each 10% of possible total “material” being reused. No points for mulching any invasive species unless via a process that assures no seed survival.

Submittal: Indicate materials being reused.

**P-12 Treating stormwater from neighboring sites or in pre-existing developments (0-12 pts).**

If the development is overcoming a deficit in stormwater treatment, such as when it is built in an already established area, then it is providing a much needed service beyond the typical minimum requirement. Similarly, some developments are on land that was permitted years ago prior to
current stormwater regulations. If the site is handling the stormwater at current code levels when it would not need to then there is a substantial environmental benefit.

Earn one point for each 10% beyond the minimum required that the stormwater system is handling (up to a maximum of 12 points for 120% more).

Submittal: Stormwater calculations and correspondence from the water management district or local government indicating the minimum required.

**P-13 Conserve land via dry stormwater areas that serve as other amenities (0-10 pts).**

By using dry stormwater retention, the land may serve dual purposes: such as a neighborhood ball field or park during much of the year. Much of Florida’s dry season occurs during cooler weather making outdoor activity pleasant. During the summer rainy season, for most of the state, temperatures are hotter and outdoor activity may not be occurring as much. By using the area for two purposes land is conserved providing environmental benefit.

Earn one point for each 10% of stormwater area designed for dual land use. Earn two bonus points if it used for preserving existing native vegetation. Maximum ten points credit.

Submittal: Drawings and calculations indicating the expected period of dryness.

**P-14 Community food plot, garden parks (0-10 pts).**

Increase development densities to leave or create agricultural greenbelt or community plot as part of the development plan. Growing food and plants locally can reduce environmental harm from shipping of plants and in some cases may be the most appropriate use of the land.

Earn five points for incorporating an area of at least 5 acres or 5% of the site (whichever is less) with an established or planned agricultural area. Earn five bonus points if agricultural area is deed restricted to be farmed organically.

Submittal: Indicate deed restrictions or other methods that will assure the area remains agricultural use (and organic, if credit is sought) even if development pressures increase in future years.

**P-15 Non-listed environmental benefits (0 - 5pts)**
Provide description of any significant environmental benefits achieved, beyond typical new development, that are not covered in the above categories. The points attributed should be computed, if possible, relative to environmental benefit achieved by other measures. Note that one will only receive discretionary points for projected environmental results, not for meeting existing code in a creative manner or for money spent to alter some existing land feature, or other troubles one went through to obtain an already listed Green feature.

Submittal: Detailed description and projected environmental benefit.
Category 2: Circulation

About 35% of the state’s primary energy use goes towards transportation, and motor vehicles emit several pollutants that EPA classifies as known or probable human carcinogens. EPA estimates that mobile (car, truck, and bus) sources of air toxics account for as much as half of all cancers attributed to outdoor sources of air toxics. Surfaces for transportation and parking of vehicles decreases pervious surface area and leads to runoff that has to be controlled to prevent pollution to our water bodies. Solutions include: locating residences where there are schools, shopping, and office areas nearby; providing adequate alternatives to the private automobile; and minimizing road areas. Green road design should provide close access to destinations, pedestrian structure, building orientation, street trees, minimal street lighting and green road construction materials.

C-1: Pedestrian structure (0-12 pts)

Earn 2 pts. if >= 4’ sidewalk is continuous on one-side of each street; earn 3 pts. If pervious nature trail is used instead of traditional material. Alternatively, earn 2 points in cases of 1 acre or more average lot size if a non durable surface is used in lieu of a paved sidewalk. Earn 6 pts if >= 4’ minimum width continuous sidewalk is used on both sides of street in neighborhoods with average lot sizes of less than 1 acre. Sidewalks must be installed at the time streets are built and extend along all roads, including those past conservation areas, water retention areas, and non-residential property in order to make a continuous transportation system for bicyclists, wheelchair pedestrians, and others.

Bonus points available for additional miles of pedestrian/bicycling trails accessible to all property owners in development as a percentage of road miles in development:

<table>

</tr>
<tr>
<td>40 - 49.9%</td>
<td>4 pts</td>
</tr>
<tr>
<td>50 - 59.9%</td>
<td>5 pts</td>
</tr>
</tbody>
</table>
Example: Suppose a development called Mulberry Trail has 4' sidewalks along both sides of each street, and Mulberry Trail has 1.6 miles of streets. Suppose they also have preserved an old Florida settler walking dirt trail that is 0.8 miles within their development. The percentage of additional pedestrian/bicycling trails would be 100x(0.8)/1.6= 50%. They would earn 5 bonus points to add to their 6 basic sidewalk points for a total of 11 points.

**C-2: Road design (0-6pts)**

If road design does not exceed “street design guidelines for healthy neighborhoods” for road widths based on volume or uses published TND standards they earn 3 pts. Also, if the development does not contain any full pavement cul-de-sacs they earn one point (1pt). If road design self-enforces speed limits 25 mph or under in residential areas through short narrow roads, many stops, or other traffic calming methods they earn 2 pts. Wide radius curves and typical width roads will generally not qualify for these traffic calming points.

**Healthy Neighborhood Street Design***

Notes:
1) Ideal speeds and width are given.
2) Flexibility is permitted, but design speeds must be adhered to.
3) These guidelines are not recommended for Conventional Neighborhood Development.
4) Traditional Neighborhood Design layout, a strict adherence to TND principles of mixed use, walking and bicycling emphasis, a central place, trip containment, open-street parking, trails, traffic volumes and speeds are all linked.

5) Multiple entries aid fire response times.

References

C-3: Street trees (0-6 pts)

Street trees make more of a “room” out of the street and help with traffic calming as well as provide great relief from Florida’s hot sun when walking, bicycling, or getting into a parked car. Trees help clean the air and by shading the street can help reduce the “heat island” effect that increases the temperature of the surrounding area. They can reduce air conditioning bills by reducing the temperature and sometimes through direct shading of nearby residences.

Earn the 2 points by planting all streets with native shade trees such that: (1) Ample room is provided for their survival as recommended by the Architectural Graphic Standards 10th edition; and that (2) at reasonably expected maturity, the trees will provide canopy coverage of 70% or more of the required portion of the Right of Way (ROW)” for all streets. Earn 4 points for 80% or more of required portion of the ROW coverage, 6 points for 90% or more of required portion of the ROW coverage. Trees should not interfere with overhead utilities, which may preclude the ability to earn these points. The “required portion of the ROW” consists of the first 8’ of roadway pavement and a...
greater than or equal distance adjacent to the pavement on each side.

Submittal: A dimensioned site plan showing tree species locations, and required portion of the ROW.

**C-4: Street lights (0-10 pts)**

Lighting accounts for 20% to 25% of all electricity consumed in the United States. Lighting uses energy, alters wildlife habits, and reduces the visibility of stars and sky.

Earn 4 points for installing bulbs that produce ≥95 lumens per watt on ≥80% or more of street lights. Earn 2 points if ≥80% of lights are motion activated, 2 bonus points if ≥ 80% or more of lights are such that they are full cut-off luminaires if the bulb(s) in the fixture exceed 26W (Dark-sky friendly specs). Two bonus points if ≥ 80% of lights are solar-powered.

Receive 5 pts for no street lights in development if the development includes road building efforts and two or more intersections and property owners are not forced to have exterior lighting operating.

**References**

type of lamps and their lumens per watt: [http://www.darksky.org/~ida/infoshts/is052.html](http://www.darksky.org/~ida/infoshts/is052.html)

street lighting study (from New Zealand): [http://www.energywise.co.nz/content/ew_government/councils/streetlighting.pdf](http://www.energywise.co.nz/content/ew_government/councils/streetlighting.pdf)
international dark sky association: [http://www.darksky.org/](http://www.darksky.org/)

Submittal: Street light specifications

**C-5: Parking (0-7 pts)**

Earn 1 pt if ordinance requires bicycle parking at all community facilities and businesses to be located closer than all non-handicap parking; 2 pts if shared parking is incorporated in plan between residences, businesses, religious institutions; up to 5 pts for requiring incorporation of preserved or planted shade trees in parking areas (1 pt for 1 tree per 4 parking spots, 2 pts for 1 tree per 2 parking spots, 4 pts for 1 tree per 1 parking spot, 5 pts for 2 trees per 1 parking spot).
Trees must be planted in areas large enough to support the trees for their lifetime in accordance with space requirements given in the Architectural Graphic Standards, 10th edition, or signed off by a certified arborist.

**Submittal:**
1) Site plan
2) Description of why developer should receive points for shared parking
3) Written documentation for the bicycle parking point
4) Written documentation for the tree provision

**C-6 Connections (0-6 pts)**

Multiple connections usually result in fewer vehicle miles traveled saving energy and pollution.

Earn 4 points by having at least four different connections to surrounding road and pedestrian network. The connections must be to more than one roadway (that is, four connections to the same arterial does not provide the purpose of this, which is to allow traffic to flow freely in all directions, thus reducing distances traveled to destinations).

Earn two bonus points if all connections have public access - minimum of two connections to different roadways (no gated entries).

**Submittal:** Show locations of connections; if connections will occur in future phases show connection to future phase and the planned connection from future phase to surrounding network

**C-7 Orientation (8 pts)**

The path of the sun is well known, and in mid-summer east and west building facades receive over twice as much solar heat gain as south and north sides. Northeast, northwest, southeast and southwest orientations are not much better than east and west. Thus orienting streets so the most exposed sides of the house (generally the front and the back) are close to due north and south will save energy for building owners. Even on narrow lots which may necessitate much longer sides
than front and back, the front and back will generally tend to be exposed to the sun more because adjacent buildings will shade the sides.

Earn two points if $\geq 60\%$ of buildable lots are designed to face within 30-degrees of due north or due south, four points for $\geq 70\%$, six points for $\geq 80\%$, and 8 pts for $\geq 90\%$.

**C-8 Road/trail/parking construction materials (0-10 pts)**

Pervious road and trail materials will generally reduce stormwater runoff creating a potential environmental benefit. To ensure that these pervious pavements work as they are intended, they should be constructed according to the design and specifications of an engineer with experience in this type of material or one that has successfully completed a course in this type of design, such as those offered by the NCSU Cooperative Extension. Also, there are various recycled materials that can be used as part of road and trail construction.

If 25% by area is pervious, earn 3 pts; if 50% or more earn 6 pts; also earn 1 pt for each 25% of road construction material made of recycled content.

Submittal: Material used and calculation of perviousness.

**C-9 Access (0-20 pts if part residential; generally no points if there is no residential)**

Walking, bicycling, and even some new electric vehicles usually only substitute for automobiles if distances to destinations are kept short. Safe walk or bike trip as defined here means a sidewalk or other off-road path that does not cross a three-lane or four-lane roadway with a posted speed of over 30 miles per hour or does not cross a two-lane road with a posted speed of more than 35 miles per hour, unless the road is an underpass or overpass.

School access: Earn 1 pt if 50% of all housing units are within 1 mile and can access a school by walking and biking safely (see definition); 2 pts if 100% of housing units meet this criteria. Double the points for inclusion of all K-12 schools meeting the criteria. Earn 1 bonus pt for each K-12 school site donated by the developer to help accomplish this purpose (limit: four school access bonus points).

Retail access: Receive 1 pt if 50% of housing units are within $\frac{1}{2}$ mile safe walk, 2 pts if 50% of all housing units are within a $\frac{1}{4}$ mile safe walk, 3 pts if 100% of housing units are within $\frac{1}{2}$-mile safe walk, 4 pts if 100% within $\frac{1}{4}$ mile safe walk. Receive 2 bonus pts if development includes a pedestrian friendly retail center (such as a traditional town center or retail on pedestrian trails).

Transit access: Receive 1 pt if 50% of housing units within $\frac{1}{2}$ mile safe walk, 2 pts if 50% of all housing units within a $\frac{1}{4}$ mile safe walk, 3 pts if 100% of housing is within 1/2-mile safe walk, 4
pts if 100% within 1/4 mile safe walk To receive credit there must be shade / rain shelter and bench at any “hub” waiting area.

Pools and parks: Pools and parks are other frequented destinations and access to community pools may reduce the number of pools needed (see Amenities section for environmental benefits). Receive 1 pt if 50% of housing units within 1/4 mile safe walk of a pool and a park space, 2 pts if 50% of all housing units within a 1/8 mile safe walk, 3 pts if 100% of housing units within 1/4-mile safe walk, 4 pts if 100% within 1/8 mile safe walk.

Employer access: Earn 1 pt if number of jobs within ½ mile radius is >= 50% of the total # of housing units, 2 pts if >= 100% of housing units, double points for “safe walk” to job destinations.

Submittal: A site plan depicting: School sites and type, employer locations and number of employees (for newly constructed commercial buildings provide estimates and basis for estimates), transit type and schedule. Maximum points allowed for this category: 20.

**C-10 Non-listed environmental benefits (0 - 5pts)**

Provide description of any significant environmental benefits achieved, beyond typical new development, that are not covered in the above categories. The points attributed should be computed, if possible, relative to environmental benefit achieved by other measures. Note, that one will only receive discretionary points for projected environmental results, not for meeting existing code in a creative manner or for money spent to alter some existing land feature, or other troubles one went through to obtain an already listed Green feature.

Submittal: Detailed description and projected environmental benefit.
Category 3: Green Utility Practices

A developer makes many decisions regarding utilities. How much land will the utilities take, which utilities are to be provided? These decisions may have environmental consequences regarding land use, tree plantings, and irrigation choices for parcel owners. Like some other decisions, a local government or a utility company may not allow for some of the suggestions herein, and at other locations some of these suggestions may be mandatory. FGBC rewards developers who fight for these Green utility methods.

U-1 Minimize disturbance due to utilities (0 to 15 points)

Preserving land and trees when laying the utilities can help the environment. Underground utilities leave room above ground for tree canopies to grow without interfering with utility lines. Earn 4 pts if all utilities are underground. Earn 8 bonus pts if all compatible underground utilities are coordinated to be carried in a common sleeve (earn credit even if gas line or electric is not in this common sleeve), or earn 8 pts. if R.O.W. for utilities has been reduced by 30% from the standard practice in your jurisdiction. This reduces disturbance during construction and later during maintenance. Earn three bonus pts for making special provisions to save existing trees while laying utilities (must include a tree survey with submittal and have saved at least 12” caliper per 1000 linear feet of tree).

Submittal: Enclose any written agreements with utilities, photos or other documentation of utility location, or tree survey overlay with utility lines for tree protection credit. If claiming points for R.O.W. reduction, include written documentation from local jurisdiction indicating typical R.O.W.

U-2 Deliver Green Power (0-25 points)

Energy use in buildings and common areas usually has significant environmental impact off-site. Green Power comes from renewable resources such as wind and solar. Earn 2 points for each ten percent of the development’s power demand that will be delivered with Green Power either produced on-site or purchased as part of a Green-pricing agreement with a utility. Receive 2 pts if property buyers will receive some financial incentive from the developer or homeowner's association (of at least $200 value or 1% of the retail price of the property - whichever is less) to comply with requirements to participate in the green pricing program for at least 12 months.

Earn five points for delivering common areas with 100% Green Power or for not using any power in common areas.

Maximum 25 points.
Submittal: Agreement with utility, documentation defining applicable incentives or CDRs, and calculation showing how you arrived at the point credit.

U-3 Supply irrigation system that uses stormwater or reuse water (0-15 pts)

Irrigation water does not have to be of potable quality. Building in a central irrigation system has many benefits. First, the watering can be controlled from a central point so water conservation measures such as a rain sensor may control the entire system. In some instances, a system that runs from local water retention/detention areas can be used. In some municipalities a central reuse may be available for connection.

Earn 8 pts for connecting each parcel to a stormwater or reuse system. Earn 2 pts for connecting all irrigated common areas. Earn 5 bonus pts for any system that would turn off the irrigation for the entire development based on weather based or soil systems.

Submittal: Irrigation plan indicating controls and source of water.

U-4 Irrigation meter system (5 pts)

Earn 5 pts for a system of metering the reuse water, well water or potable irrigation water on each parcel. Even reuse water can be in limited supply during some times of year.

U-5 Water irrigation budget (10 pts)

Limit withdrawal for irrigation by parcel owners and to common areas based on some budget (e.g., 1000 gallons/month/.1 acre) through controls.

Submittal: Description of irrigation budget and enforcement system.

U-6 Submeter parcels by end-user (5 pts)

If there are any commercial or multi-family properties, arrange for each end-user to receive a meter for the utility. This will tend to encourage conservation and allow the end-user to receive benefits for efficient operating behavior and conservation measures. Reference: Florida Water Conservation Initiative, Florida Dep, pp. 71 -74.

Submittal: Submetering plan.

U-7 Non-listed environmental benefits (0 - 5pts)
Provide description of any significant environmental benefits achieved, beyond typical new development, that are not covered in the above categories. The points attributed should be computed, if possible, relative to environmental benefit achieved by other measures. Note that one will only receive discretionary points for projected environmental results, not for meeting existing code in a creative manner or for money spent to alter some existing land feature, or other troubles one went through to obtain an already listed Green feature.

Submittal: Detailed description and projected environmental benefit.
Florida Green Building Coalition, Inc.

Green Development Reference Guide

Category 4: Amenities

The amenities the developer provides and how they go about providing them can help or hinder the sustainability of occupants. FGBC gives credit for amenities that are likely to have a beneficial impact on the environment relative to typical practice. Nature parks and common preservation areas earn points under category 1. Some of the amenities described here allow for common areas of intense use instead of many parcels trying to provide many less efficient amenities.

A-1: Neighborhood parks (0-4 pts)

Develop neighborhood parks that are within:
1/4 mile of 50% of households and earn 1 pt,
within 1/8 mile of 50% of households earn 2 pts,
within 1/4 mile of 100% of households earn 3 pts,
within 1/8 mile of 100% of households earn 4 pts.
Neighborhood parks are to contain playground equipment that uses Green construction materials (i.e, recycled content or recyclable materials) with seating areas and native shade trees.

A-2 Community or regional park (2 pts)

Earn 2 pts for developing a community or regional park in plan – generally a regional park will be 10 acres or more and designed to serve a large part of the surrounding community. It will contain recreational facilities such as ballfields, court recreation, playgrounds, and water body access.

A-3 Community pool (0-4 pts for developments with single family residences)

Swimming pools require water, energy, and chemicals to operate. By providing one or more pools for the development to share instead of
having many individual pools, precious resources can be conserved.

Earn 1 pt for providing a common pool available to each resident, 2 pts if there is a common pool for each 300 households, 3 pts if there is one for each 200 households and 4 pts if there is one for each 100 households. These points are not available if deed restrictions require individual pools for any single family lots.

**A-4 Compost/Mulch facility (3 pts)**

Everyone may not choose to invest their real estate and time in creating their own compost pile for yard waste material. Compost piles help create useful fertilizer out of waste product. Although some municipalities have a municipality-wide facility for composting, one within the development is more convenient for regular use.

Earn 3 pts for developing a mulching/compost facility within development and compost facility management plan.

Submittal: A compost facility management plan that indicates how propagation of exotic seeds will be controlled. Also indicate location and management of mulch facility.

**A-5 Golf course is Audubon International certified, minimally treated or excluded (6 pts)**

Golf courses usually use extensive amounts of chemicals and water to keep the playing surface in shape for the wear it takes. To become Audubon International certified, a course in the planning stages must successfully complete and implement a natural resource management plan to the Audubon Signature Program’s specifications. Existing golf courses can qualify under the Audubon Cooperative Sanctuary Program for Golf Courses. Alternatively, earn the points for any golf course that has 40-percent or less of its total acreage in maintained area (irrigated or chemically-treated or concrete or buildings). For developments with multiple golf courses, points can be credited as a percentage of total golf courses (e.g., earn 3 pts if one of two courses meet the criteria).

Also earn 6 pts if development is over 300 acres and no golf course is planned in present, past, or future phases.

Submittal: Audubon International certification if golf course included or alternatively, calculation of maintained vs. total acreage.
A-6 Landscape criteria and management plan for common areas and amenities (0-6pts).

Earn 2 pts for using 80% or more native, drought-resistant plant material in non-recreational areas. Earn 2 pts for water-conserving irrigation systems in common areas and recreational facilities. Earn 2 pts for a detailed management plan for “Green” management of amenities.

Submittal: Amenity management plan.

A-7 Non-listed environmental benefits (0-5pts)

Provide description of any significant environmental benefits achieved, beyond typical new development, that are not covered in the above categories. The points attributed should be computed, if possible, relative to environmental benefit achieved by other measures. Note that one will only receive discretionary points for projected environmental results, not for meeting existing code in a creative manner or for money spent to alter some existing land feature, or other troubles one went through to obtain an already listed Green feature.

Submittal: Detailed description and projected environmental benefit.
Developers can exercise considerable influence and control over purchasers by incorporating environmentally sound practices into covenants and restrictions for individual purchasers. There are many good programs available that are detailed in the home and commercial Green standards. In lieu of giving credit for each individual item, FGBC is simply giving credit for referencing those standards in various ways, and in making sure that the covenants and deed restrictions do not prohibit a purchaser from qualifying for points for the home and commercial standard.

**CDR-1 Green Construction Standards 0- 40 pts**

Select one of the following:

Include information making property purchasers **aware** of other appropriate FGBC green standards (i.e., Green home, Green commercial building) - 1 pt

or

Include information **encouraging** lot purchasers to comply with the appropriate Green standard - 2 pts

or

Provide some tangible **incentive** (of at least $200 value or 1% of the retail price of the property - whichever is less) to comply with the appropriate Green standard - 4 pts

or

**Require** each residential property owner to comply FGBC residential standards and each commercial property owner to comply with FGBC or USGBC green commercial standards - 40 pts

or

**Require** each property owner, via the CDRs, **to comply with one or more minimum components of the FGBC Green home or FGBC or USGBC Green commercial standard** as applicable described below either through prescriptive measures or the flexibility within the standard, scoring points per section as follows. The CDRs must include sufficient educational information to aid the buyer in making environmentally sound choices. For details, refer to the FGBC Green home and commercial designation reference guides.
For Homes and Commercial Buildings
Meet minimum given in FGBC Home and Commercial Standard Categories:
2. Water - 5 pts.
3. Lot Choice - no additional pts.
4. Site - 3 pts.
5. Health - 3 pts.
7. Disaster Mitigation - 2 pts.

CDR-2 No language that prohibits Green practices - 5 pts

Earn these points only if the CDRs do not prohibit:
- using available water-efficient (i.e., bahia, bermuda) or bug-resistant grasses and plants,
- using solar systems on south-facing roof regardless of the direction of the street,
- driveways that use porous pavers, not installing irrigation systems, not installing any turf,
- or
- any other language that obviously prohibits the ability for site purchasers to obtain credit for any Green home or Green commercial building point criteria.

The development also earns these points if there are no covenant and deed restrictions.

CDR-3 Non-listed environmental benefits (0 - 5pts)

Provide description of any significant environmental benefits achieved, beyond typical new development, that are not covered in the above categories. The points attributed should be computed, if possible, relative to environmental benefit achieved by other measures. Note that one will only receive discretionary points for projected environmental results, not for meeting existing code in a creative manner or for money spent to alter some existing land feature, or other troubles one went through to obtain an already listed Green feature.

Submittal: Detailed description and projected environmental benefit
Florida Green Building Coalition, Inc.

Green Development Reference Guide

Category 6: Provide Educational Information to Help Achieve and Promote Green Living Practices

Educating all members of the development team, builders, and future occupants about Green practices can lead to increased awareness and environmental benefit. Providing these groups with Green building information in the form of workshops, signs, and written material on-site will earn credit towards the designation.

E-1 Staff training (0 – 14 pts)

Earn one point for each member of the development team (e.g., planner, engineer, architect, landscape architect, builder, marketing staff, administrator, sales) who has earned six hours or more of CEU credits in a Green development or Green construction course within 36 months of date of submittal so long as the lead designer/decision-maker is one of the members receiving credit. Earn four points for regular cross-training among team members (developer, engineering, design, sales, marketing etc.). Maximum credit 14 points.

Submittal: For each claimed CEU submit a course agenda, team member attending, their role on the development team, number of CEUs credited. Cross-training should be documented by attendance by all team members at a Green seminar/conference/workshop that was six hours or longer.

E-2 Dedicated on-site green specialists for parcel owners (0-16 pts)

If the developer or development association, such as homeowners association, has a dedicated ecologist working on-site conducting research and providing tours to residents and visitors, earn four points. Ecologist must devote at least 8 hours per week to the development and adjacent area (e.g., if development is on a water body the ecologist may spend some of the time investigating or touring the adjacent water body).

Similarly, if the developer or development association has a dedicated “Green” landscape specialist, “Green” design/construction specialist, and/or “Green” interior design specialist available on-site to provide services to parcel owners earn, four points each (only earn credit for each different person that is available regardless of how many fields that individual’s expertise is in).

Submittal: Documentation of the hiring or plan to hire the specialist, including advertised minimum requirements or resume of specialist regarding “Green” practice experience.
**E-3 On-site “Green” buyer training or buyer incentives for off-site training (0- 8 pts)**

Earn up to eight points for offering courses for potential or existing purchasers regarding green construction and operation practices. Earn one point for each hour of unique training provided quarterly or more often.

Submittal: Courses, who is training, qualifications of trainers, how courses are marketed, frequency of courses, and any incentives for buyers taking off-site training.

**E-4 Environmental education in marketing material (0-5 pts)**

Earn three points if 10% of the marketing dollars spent is aimed towards *educating* the recipients of the environmental consequences of their actions or of the environmental features contained. Marketing material consists of any sales office material, signs, displays, newsletters, brochures, other media sales material, and any other efforts aimed at marketing the development. Credit will not be given if marketing material provides exaggerating claims regarding the environmental benefits of development features. Earn two points for including contract addendums that specify Green terms and conditions.

Submittal: Any brochures, photos of signs, and a description of all other marketing plans including the portion devoted towards environmental education. Include sample contracts for contract addendum points.

**E-5 In-house Green practices (0 - 10 pts)**

The developer should lead by example, not just as a marketing scheme.

Mission: Earn two points for having a mission statement that clearly states the development company’s dedication towards being an exemplary environmental steward in all aspects of their business and having the mission statement printed on all written marketing material.

Printing: Earn one point if all marketing material is printed on at least 25% recycled content paper, or two points if all marketing material is printed on 100% recycled content paper. Earn one point if no paper has been bleached. Earn one point if all inks are soy-based.

Purchasing: Earn two points if the development company has a “Green” purchasing policy consistent with state recommendations.

Recycling coordinator: Earn two points if the developer has an assigned person responsible for assuring recycling of recyclable materials from all aspects of the business.
Submittal: Written purchasing policy including writing the printing policy on the brochures (i.e., “Printed on 100% recycled content paper using soy inks”). Mission statement, description of recycling coordinator.

**E-6 Demonstration Green buildings (4 pts)**

Earn the four points if the first building (Residential or commercial) built earns a Green designation as an example for others and for a period of at least two months upon completion is open to prospective purchasers in the development.

Submittal: Description of subject property and receipt of appropriate FGBC Green designation application form.

**E-7 Outdoor environmental education signs (0 - 22 pts)**

The development may continue to function for hundreds of years, long after initial sales and construction. Long-lasting outdoor signs can be used to educate every generation that lives there of the environmental consequences of their actions. Earn two points for each for the following items (up to 20 pts):

- Signs that show where stormwater drains
- Signs that indicate the environmental benefit of pedestrian transportation
- Signs that indicate wildlife corridors and/or indicate the indigenous wildlife at the time of development
- Signs that educate about the need/benefit of conserving water
- Signs that educate about the need/benefit of conserving energy
- Signs that indicate the benefit of outdoor lighting that does not brighten the sky
- Signs that educate about the types of native plants and any environmental benefits
- Signs that educate about minimizing impact on preserved, created, or restored areas and how to enhance the environment.
- Signs that educate on how to create and maintain habitats for native species in their yards.
- Any other signs that are for environmental education (bird nests, butterfly gardens, organic gardening, etc.).

Earn two bonus points if all signs are made of long-lasting Green materials. One Green spec is: A kit of parts that could be bolted together, with a pin set type pre-cast concrete pier, the posts from a wood-plastic composite, and the sign itself either a naturally resistant species such as cedar or cypress, pine with ACQ pressure treatment, or the same wood-plastic composite with recycled content used in the posts.
Submittal: Indicate planned placement of signs in site plan and provide copies of text/graphics of signs. Signs must be of sufficient size and placement to serve their educational purpose. Indicate the Green specification that the sign material is meeting if credit is sought.

**E-8 Green web site: (0-7 points)**

A Web site will be constructed that will highlight environmental information and management strategies pertinent to the community. This Web site will indicate: what the developer has done to earn the FGBC designation (2 pts); the current monitoring and maintenance plan (2 pts); content or links to content for advice on proper environmental maintenance of common parcels (1 pt), green construction (1 pt), and operation of individual parcels (1 pt). This Web site should be set up originally by the developer and could be maintained by the homeowner association or an outside organization. Ideally, the Web site would be linked to interpretive signs where the Web site would provide more in-depth information.

Submittal: web address

**E-9 Monitoring program (0-9 pts)**

A monitoring program will be set up by the developer allowing homeowners to monitor wildlife (2 pts), energy (2 pts), water use(2 pts), and water body quality(2 pts). Monitoring will help the neighborhood keep track of environmental variables over time. Results will give residents an important feedback about how various management strategies affect environmental parameters. One bonus point for making the data available on the neighborhood/development web site.

Submittal: Monitoring plan.

**E-10 Non-listed environmental benefits (0 - 5pts)**

Provide description of any significant environmental benefits achieved, beyond typical new development, that are not covered in the above categories. The points attributed should be computed, if possible, relative to environmental benefit achieved by other measures. Note that one will only receive discretionary points for projected environmental results, not for meeting existing code in a creative manner or for money spent to alter some existing land feature, or other troubles one went through to obtain an already listed Green feature.

Submittal: Detailed description and projected environmental benefit.
Florida Green Building Coalition

Florida Green Development Designation Standard
Pre-Submittal Application

Use this form for committing to meet the Florida Green Development Designation Standards and to request FGBC assign a contact person for answering questions regarding verification and submittal materials.

Development / Property Information:
Development Name:________________________________________________ County:___________________
Street/Legal Address of Property: ___________________________________________________________
City__________________________ ST_______ Zipcode______________(Required)
Total Acreage: _______________ Planned type of development by acreage e.g., residential, commercial, etc:

Application Fee:
Base Fee: = $ 2,000
Plus Per Acre Fee: $1 x _______ = $ _________
Total Acres
Total Application Fee (max. $5,000) $ _________
Deposit Submitted with Application (minimum deposit required is $500) $ _________
Make Check Payable to: Florida Green Building Coalition
Mail Application and Payment to: FGBC • 6615 Mahan Dr., Suite 104 PMB 50 • Tallahassee, FL 32308

Agreement:
I have read the entire Florida Green Development Standard and will abide by the policies it contains. I understand that this deposit allows FGBC to assign a project evaluator to provide information regarding documentation needed to verify points. I plan to submit the necessary documents indicated in the Green Development Reference Guide for all credits/points I am claiming. I understand that failure to complete the development or to meet the requirements of the Standard will not be grounds for a refund of the deposit. I have contractual authority to sign for the developer.

The purpose of this document is to list the various opportunities for earning credit points towards being designated a Green Development by the Florida Green Building Coalition, and to serve as an application form for the designation. **The entire green development designation standard of which this is but one part should be read and understood in its entirety before applying.** The Green Development Designation applies to the horizontal planning, design, and development of the land. Other green standards (Homes, Commercial, Schools) apply to individually permitted parcels and building construction. Each of the items indicated in this checklist is included in a reference guide that is also part of the standard. **The reference guide indicates what must be accomplished to earn the credit points and what must be submitted.** This checklist indicates whether there are any extra required submittal materials beyond the basic requirements: a detailed site plan, in such scale as to make any required detail for a given credit point clearly visible, and the covenants and deed restrictions. Indicate the points you believe you achieved in the appropriate locations. For questions, contact info@floridagreenbuilding.org and include “development std” in the subject, or call 321-638-1404.

<td>Circulation</td>
<td>75</td>
<td>(must be ≥ 15)</td>
</tr>
<tr>
<td>Utilities</td>
<td>50</td>
<td>(must be ≥ 12)</td>
</tr>
<tr>
<td>Amenities</td>
<td>25</td>
<td>(must be ≥ 5)</td>
</tr>
<tr>
<td>CDRs</td>
<td>50</td>
<td>(must be ≥ 8)</td>
</tr>
<tr>
<td>Education</td>
<td>75</td>
<td>(must be ≥ 15)</td>
</tr>
</tbody>
</table>

Sum: 400 (must be ≥ 200)*

*Add to 200 any points short of category minimums (if you score only 3 in CDRs then total points required will be 200+(8-3)=200+5=205).

2. Development Information:

Development Name: ____________________________ County: ____________________________

Legal Address of Property: _______________________________________________________

Developer Name: __________________________________ Developer Phone: _______________

Developer Address: ____________________________ Developer E-mail: __________________

City: _______________ Zip Code: _______________ Website: ____________________________

Pertinent development team members and their organizations (e.g., project manager, engineers, landscape architects, etc.). Use more paper if necessary. Indicate key Green Advocate if there was one: ___________________________________________________________

3. Application Fee:

Base fee = $2000

Per acre fee: $1 x ________ acres = ________

Total application fee (max. $5000)= ________

- Deposit already paid ________

Total due ________

4. Agreement:

I have read the entire standard and will abide by the policies it contains. The points indicated above are consistent with the Green Development Standard Reference Guide. I understand that consistent with the standard, FGBC will assign a project evaluator to verify the points. I am submitting, or plan to submit, the necessary documents indicated in the reference guide for the credit points I am claiming. I have authority to sign for the developer.

Name (print or type): ____________________________ Title: ____________________________ Company: ____________________________
